**Impact**

Annual economic impact generated by growers:

~$4.7 billion
($12.7 million/day)

**Indirect Business Taxes**

Indirect business taxes generated by growers:

~$145 million
($400,000/day)

That's more than the 2019 budget for...

U.S. Department of Homeland Security’s Operations and Support budget ($129 MILLION)

**Jobs**

Full-time equivalent jobs created and sustained by growers each year:

44,535

**Footprint**

National highbush blueberry acreage*:

109,584

*Bearing and nonbearing acres

Highlights of the economic impact from U.S. highbush blueberry growers
LABOR INCOME

Labor income generated by the business activities of growers:

~$1.8 billion
($4.9 million /day)

These dollars go into wages and salaries for new employment, as well as expanded incomes to those already in the labor force for activities such as overtime pay. These dollars are then diffused throughout the economy as the funds are spent on crucial goods and services such as food, housing, transportation and health care.

“The U.S. highbush blueberry industry — including 12,739 blueberry farms — is a powerful financial force. Behind every farm are growers who not only tend a truly remarkable superfruit, but also stimulate business activity, create thousands of jobs and contribute mightily to the economy.”

— Kasey Cronquist | President
U.S. Highbush Blueberry Council

About the Study

The economic impact study was commissioned by the U.S. Highbush Blueberry Council and conducted in April 2020 by Dennis Tootelian, Ph.D., Emeritus Professor at California State University, Sacramento. The analysis is based on U.S. highbush blueberry acres in production and in development. Projections are based on annual average expenditures, which means that this impact is expected to occur each year that such spending occurs. Acreage statistics were secured from the U.S. Department of Agriculture. The full economic impact study and analysis is available at www.ushbc.org.
